Xbox Controller

xone Driver

Installation

```
#Installation:  
dnf copr enable sentry/xone  
dnf install xone lpf-xone-firmware  
lpf approve xone-firmware  
lpf build xone-firmware  
lpf install xone-firmware  
reboot #(this is needed to load the modules)
```

Uninstalling

```
#Removal:  
dnf copr disable sentry/xone  
dnf remove xone lpf-xone-firmware xone-firmware
```

AirPlay discovery on Fedora

Problem

Other laptops, Macs, iPads, or Apple TVs on the same local Wi-Fi network appear as available audio output devices or trigger pop-ups (e.g., in Discord or system settings) asking to switch audio streams.

Cause

Fedora uses **PipeWire** as its primary audio server. By default, it includes automatic network discovery for **AirPlay** / **RAOP (Remote Audio Output Protocol)** devices. If a neighbor or classmate has network sharing or AirPlay enabled, PipeWire will automatically detect and list it.

Solutions

Method 1: Remove the Discovery Package

If you never intend to stream your laptop's audio to an AirPlay receiver, Apple TV, or another computer over Wi-Fi, the cleanest solution is to uninstall the configuration package responsible for it.

*Note: This will **not** affect local Bluetooth earbuds, speakers, or physical audio devices.*

```
sudo dnf remove pipewire-config-raop
```

Method 2: Disable Discovery via Config File

If you prefer not to uninstall system packages, you can explicitly tell PipeWire to skip loading the RAOP module via a user-level configuration override.

Create the configuration directory:

```
mkdir -p ~/.config/pipewire/pipewire.conf.d/
```

Create and open the override file:

```
nano ~/.config/pipewire/pipewire.conf.d/disable-raop.conf
```

Paste the following block:

```
context.properties = {  
    module.raop = false  
}
```

Apply changes:

```
systemctl --user restart pipewire wireplumber
```
